## Curious Facts About Cats

By Janet Marlow

### The Nose, Knows

As caregivers we know a lot about our cats from their head to their tail. But did you know that each cat's nose pattern has a distinct print just like our fingerprints are distinct to each of us? This amazing fact about cats could also make a curious cat detective story! "By the nose print pattern on the window pane we knew that Whiskers had just been here!"

### Their Inner Cheetah

It is a fascinating part of a cat's behavior when in a split second a cat will have a burst of energy and run completely out of sight. Cats have been timed to gain a speed of 30 miles per hour running in short bursts. That's faster than a person peddling a bicycle. The fastest land speed of any animal is their feline family member, the African Cheetah. Cheetahs can run at speeds up to 75 miles per hour. Incredible!
